Shape and position of the product group

1. Definition: Machine and Criteria

An important parameter of a shrink packer is the accuracy of the formed packages. If the used film fulfils the specifications prescribed by the manufacturer of the shrink packer, the produced packets have to be in a tolerance range as explained later.

For all actions the relevant safety instructions must be strictly adhered to.

2. Inspection

2.1 Scope

Detection of the deviation of shape and position of product groups of shirked packets to a set range by means of a ruler.

2.2 Apparatus

Ruler or sliding calliper with a precision better than ± 0.01 mm. A visual inspection of the used measurement devices by a person is necessary.

2.3 Procedure

The shrink packer random samples have to be taken. The assessment threshold is the interface between the shrink tunnel exit and the downstream conveyor. The packets have to be checked accurately.

The following parameters are recommended:

Variable A =	Length of product group in MD
Variable B =	Width of product group in CD
Variable C =	Height of product group
Variable D =	Tolerance for "nested"
Variable E =	Tolerance for "angularity CD"
Variable F =	Tolerance for "angularity MD"
Variable G =	Tolerance for "centricity of the bull's eye"
Variable H =	Tolerance for "centric of the film MD front and rear"
Variable I =	Tolerance for "centricity of the film MD top"

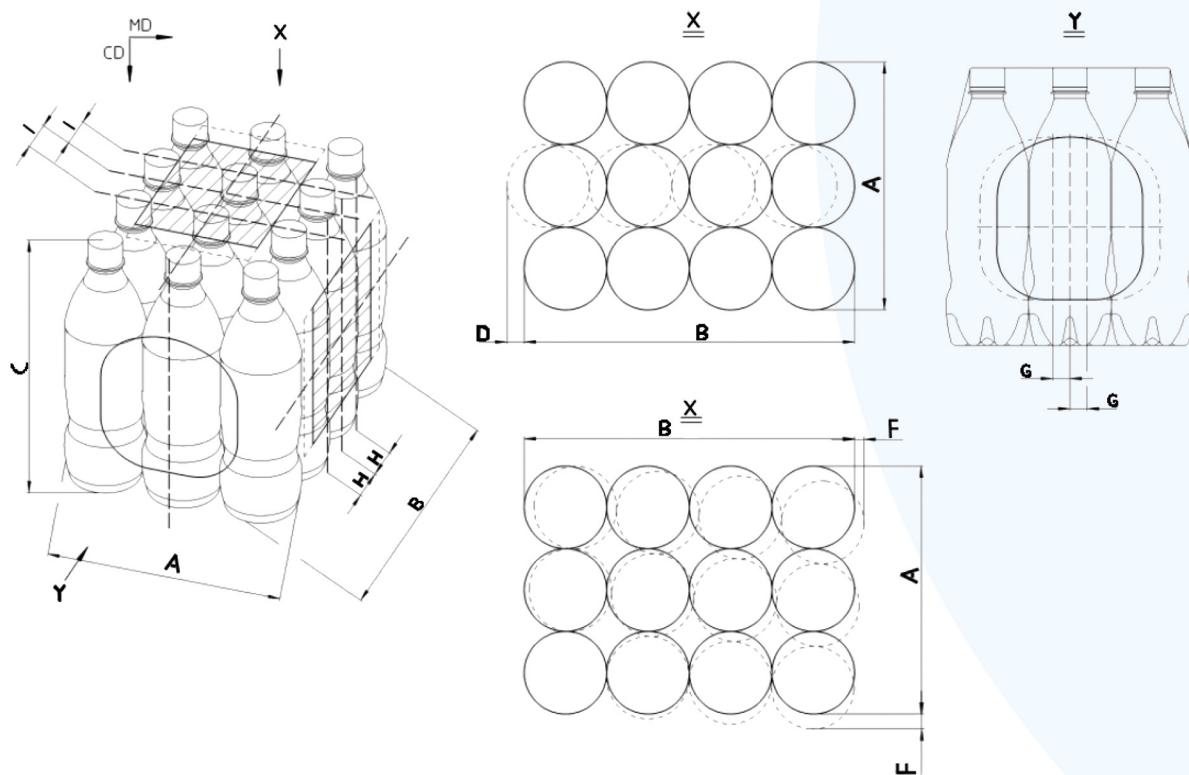

Fig. 01: Parameters concerning shape and position of a product group

3. Sampling

To check the accuracy of formed packages, samples are needed. Samples have to be taken after 15 minutes of production in standard operation and at nominal capacity.

Quantity of samples: 100 Packs.

The film should be cold and stable after the hot shrink tunnel.

4. Evaluation and Documentation

4.1 Evaluation

Variable A length min = _____ mm

Variable A length max = _____ mm

Variable A set = _____ mm

Variable A (length min) _____ \geq _____ Variable A (detected) \leq _____ Variable A (length max)

Variable B width min = _____ mm

Variable B width max = _____ mm

Variable B set = _____ mm

Variable B (width min) _____ \geq _____ Variable B (detected) \leq _____ Variable B (width max)

Variable C height min = _____ mm

Variable C height max = _____ mm

Variable C set = _____ mm

Variable C (height min) _____ \geq _____ Variable C (detected) \leq _____ Variable C (height max)

Variable D tolerance min = _____ mm

Variable D tolerance max = _____ mm

Variable D set = _____ mm

Variable D (tolerance min) _____ \geq _____ Variable D (detected) \leq _____ Variable D (tolerance max)

Variable E tolerance min = _____ mm

Variable E tolerance max = _____ mm

Variable E set = _____ mm

Variable E (tolerance min) _____ \geq _____ Variable E (detected) \leq _____ Variable E (tolerance max)

Variable F tolerance min = _____ mm

Variable F tolerance max = _____ mm

Variable F set = _____ mm

Variable F (tolerance min) _____ \geq _____ Variable F (detected) \leq _____ Variable F (tolerance max)

Variable G tolerance min = _____ mm

Variable G tolerance max= _____ mm

Variable G set = _____ mm

Variable G (tolerance min) _____ \geq Variable G (detected) \leq Variable G (tolerance max)

Variable H tolerance min = _____ mm

Variable H tolerance max= _____ mm

Variable H set = _____ mm

Variable H (tolerance min) _____ \geq Variable H (detected) \leq Variable H (tolerance max)

Variable I tolerance min = _____ mm

Variable I tolerance max= _____ mm

Variable I set = _____ mm

Variable I (tolerance min) _____ \geq Variable I (detected) \leq Variable I (tolerance max)

4.2 Documentation

The test is passed if $\geq 80\%$ of all packages are in the tolerance range.

Shape and position are o.k.

Shape and position are not o.k.
